1.0 Environmental Statement

Commercially 2009 was a difficult year for Pamargan Products with sales following the downturn in the world economic climate for most of the year, but picked up very well towards the end of the year.

The Environmental Management System has run with few concerns and the environmental structure is now embedded within the company resulting in less waste being sent to landfill. The target of maintaining ISO14001 certification was achieved in 2009.

The main improvement in 2009 was made with the energy saving measures of power factor correction on the electrical supply and variable speed motor on the air compressor.

Our Company Environmental Policy forms part of this statement and is reviewed annually by management. The Statement and Policy are displayed in the main entrance, on the factory notice board and on our web site.

Energy usage continues to be monitored through the year and our total CO2 count was 405 tonnes.

Our main objectives for 2010 are: -

- Eliminate the use of aerosol release agent spray cans on the moulding process.
- Recycle all scrap bonded seals as scrap metal.
- Monitor paper usage in the company.

Details of these objectives are recorded in our Environmental Objectives and Targets document and reviewed annually.

Mr Mark Pace-Bonello
